

KAVISHA LIYANAGE

Nittambuwa, Sri Lanka

[kavisha.online](#) | lakshan.kavishatt@gmail.com | [+94 77 279 5318](tel:+94772795318)
[linkedin.com/in/kavisha-liyanage04](https://www.linkedin.com/in/kavisha-liyanage04) | github.com/MacroMaster101

Third-year **BSc (Hons) IT undergraduate specializing in Artificial Intelligence** at SLIIT, with a strong passion for **full-stack engineering and applied machine learning**. Has shipped production web, mobile and ML projects — including live client platforms — covering secure REST API design, relational and document data modelling, role-based access control, and data-driven dashboards. Curious, self-directed, and comfortable owning a module end-to-end within a team or taking a solo project from schema design through to deployment. **Seeking a Software Engineering or AI internship** to contribute to meaningful products, learn from experienced engineers, and gain hands-on experience building software at real-world scale.

SKILLS

- *Programming Languages*
Java, Python, JavaScript, TypeScript, SQL, HTML5, CSS3
- *Frontend Development*
React, Next.js, React Native, Expo, Vite, Tailwind CSS, Framer Motion
- *Backend Development*
Node.js, Express.js, Spring Boot, Flask, REST APIs, JWT Authentication
- *Version Control & DevOps*
Git, GitHub, Docker, AWS EC2, Vercel, Cloudflare, Maven
- *Databases & ORM*
PostgreSQL, MongoDB, MySQL, MS SQL Server, Supabase, Prisma, Drizzle, Sequelize, Mongoose
- *AI & Data Science*
Scikit-learn, Pandas, NumPy, Matplotlib, Jupyter, Feature Engineering, PCA
- *Tools & Productivity*
VS Code, Postman, Figma, Jira, Notion
- *Concepts*
OOP, RESTful Architecture, Database Design, Authentication & Authorization, Agile

PROJECTS

TravelGenie — AI-Powered Travel Planning Web Platform (Click to view [Repo](#)) Jan 2026 – May 2026
React 19, Vite, Node.js, Express.js, Flask, PostgreSQL, Sequelize, JWT

A full-stack AI-assisted travel platform for planning multi-day trips across all 25 Sri Lankan districts, combining a React frontend, an Express REST API, and a separate Flask microservice serving place, hotel and budget recommendations through content-based filtering. Owned the Feedback and Review module end-to-end — review CRUD, 1–5 star ratings for places and hotels, reaction handling, and an admin moderation queue. Contributed to a 21-table PostgreSQL schema managed through Sequelize, with JWT and bcrypt authentication, email OTP verification, and multi-currency budgeting. Six-member team project deployed on Vercel.

TravelGenie — Cross-Platform Mobile Travel Application (Click to view [Repo](#)) Apr 2026 – May 2026
React Native, Expo SDK 54, Node.js, Express.js, MongoDB, Mongoose, JWT

A cross-platform mobile companion to the TravelGenie platform, supporting three distinct role experiences: guest browsing, full user trip planning, and an admin dashboard with moderation rights. Owned the Feedback and Review System, building a unified review engine that synchronises ratings across places and hotels in real time, a report-to-hide moderation workflow with admin governance, and helpful-voting with recommendation badges. Modelled 9+ MongoDB collections through Mongoose and seeded 10,000+ transport schedules, with GeoJSON-backed maps and draft persistence across app restarts.

DengueRisk — Predictive Dengue Risk Surveillance System (Click to view [Repo](#)) Aug 2025 – Oct 2025
Python, Scikit-learn, Pandas, NumPy, Matplotlib, Jupyter, PCA

A machine learning system that classifies weekly dengue transmission risk as high or low across all 26 clinical districts of Sri Lanka, supporting proactive vector control and healthcare allocation. Built a 4,367-row multi-modal dataset spanning 2022 to August 2025 by merging case reports extracted from National Dengue Control Unit publications with meteorological features from the Open-Meteo historical weather API. Owned the feature engineering and lag-variable stage of the six-stage preprocessing pipeline, including dimensionality reduction via PCA. Also built an interactive research portal on GitHub Pages featuring a 13-plot EDA gallery and a live climate risk simulator.

Vero Salon — Production Booking Platform (Web + Mobile) (Click to view [Repo](#)) Jun 2026 – Aug 2026
Next.js 16, TypeScript, Supabase, Tailwind v4, React Native, Expo SDK 54

A live client platform for a Sri Lankan salon, spanning a marketing website with a five-step multi-service booking flow and a companion React Native mobile app sharing the same Supabase backend. Engineered race-proof availability using a PostgreSQL EXCLUDE constraint that makes double-booking structurally impossible, and synced Sri Lankan public and poya holidays from Google Calendar into a holidays table to block closed days automatically. Implemented email/password and Google OAuth authentication with in-app OTP verification, server-side token verification for cross-browser email links, guest bookings that merge into accounts on signup, and role-based dashboards for customers, stylists and administrators.

Mazora Network — Minecraft Community Platform (Click to view [Repo](#)) 2026 – Present

Next.js 15 App Router, TypeScript, PostgreSQL, Drizzle ORM, Discord API

A production community platform for a Minecraft network, serving live server and Discord member counts, news, player profiles, game modes, a full storefront and a role-based staff administration panel. Built a Discord-driven store ordering flow with ticket lifecycle management, purchase announcements and transcript archival, backed by PostgreSQL through Drizzle ORM with explicit empty states rather than placeholder content. Delivered full light and dark theming, Minecraft skin avatars throughout the interface, and accessibility support including semantic landmarks, keyboard focus states, skip navigation and reduced-motion handling.

Just For Fun — Gaming Community Web Hub (Click to view [Repo](#)) 2026

Next.js 16, React 19, Supabase, Prisma 7, PostgreSQL, YouTube Data API

A solo-built production platform for a Sri Lankan gaming crew, featuring a 3D Spline hero scene, crew profiles, community highlights, a soundboard and a merch storefront. Integrated the YouTube Data API with a PostgreSQL caching layer and a cron-authorised refresh endpoint throttled to one live refresh every 15 minutes to protect API quota. Implemented Supabase Auth and Storage across five buckets with row-level security, a twelve-section admin control room, and security hardening covering server-only service-role isolation, admin allowlist verification, and MIME and file-size allowlists on uploads.

J4FN Music — Self-Hostable Discord Music Bot (Click to view [Repo](#)) 2026 – Present

Node.js, discord.js, @discordjs/voice, yt-dlp, Docker Compose, AWS EC2, Cloudflare

A self-hostable Discord music bot with a glassmorphic web dashboard offering full remote playback control — play, pause, skip, click-to-seek, loop, shuffle, volume and queue reordering. Engineered playback resilience through a yt-dlp extraction chain with an automatic Proof-of-Origin token provider sidecar, player-client fallbacks and optional cookie authentication for restricted environments. Deployed with Docker Compose behind Cloudflare Access, exposing a public status page that deliberately publishes no server, user or telemetry data.

Secure Web-Based E-Voting System for Campus Awards (Click to view [Repo](#)) Jul 2025 – Oct 2025

Java, Spring Boot, React, Vite, H2 Database, MS SQL Server, JWT

A secure full-stack voting platform for campus award nominations, enforcing one vote per user per category with full input validation and session management. Built admin-controlled event, category and nominee management alongside real-time result dashboards, notifications and published result reports. Structured as a Spring Boot API and a separate React/Vite frontend to keep modules independently runnable and testable. Six-member second-year team project.

MetaTutor — Online Tutoring Management Platform (Click to view [Repo](#)) Mar 2025 – May 2025

Java, Maven, JSP, Servlets, MVC, Apache Tomcat

A Java web application for running an online tutoring marketplace, built on a classic MVC architecture with JSP rendering and Java Servlets handling operational logic. Delivered student registration and dashboards, tutor portfolios with qualifications and course listings, course enrolment, a card and bank transaction pipeline, a tutor rating system and comprehensive administrative dashboards.

EDUCATION

Sri Lanka Institute of Information Technology (SLIIT) 2024 – Present

BSc (Hons) in Information Technology — Specializing in Artificial Intelligence (UG)

Relevant Coursework: Object-Oriented Programming, Data Structures and Algorithms, Database Management Systems, Web Development, Software Engineering, Artificial Intelligence, Machine Learning Fundamentals

St. Mary's National College, Veyangoda 2021 – 2023

G.C.E. Advanced Level — Physical Science Stream · G.C.E. Ordinary Level — 2020

ACTIVITIES AND LEADERSHIP

- Student Member — Institute of Electrical and Electronics Engineers (IEEE), SLIIT Student Branch

REFEREES

Mr. Lahiru Mirihagoda

Associate Technical Lead, Xeynergy

Email : lahiru.mirihagoda@gmail.com

Phone : [+94 77 009 5174](tel:+94770095174)

Mrs. Chathuni Kandalama

Senior Quality Engineer, Gallagher

Email : chathuni.ww@gmail.com

Phone : [+94 71 999 6171](tel:+94719996171)
