

KAVISHA LIYANAGE

Software Engineering & AI Intern Candidate

Nittambuwa, Sri Lanka | +94 77 279 5318 | lakshan.kavishatt@gmail.com

linkedin.com/in/kavisha-liyanage04 | github.com/MacroMaster101

PROFESSIONAL SUMMARY

Second-year BSc (Hons) IT undergraduate specializing in Artificial Intelligence at SLIIT, with five shipped projects spanning full-stack web, mobile, and machine learning. Experienced in building secure REST APIs, AI-driven applications, and interactive dashboards using Java, Python, JavaScript, React, Node.js, and PostgreSQL. Seeking a Software Engineering or AI internship to apply technical skills to real-world products and contribute to engineering teams.

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript

Frontend Development: React, React Native, Expo, Vite, HTML, CSS

Backend Development: Node.js, Express.js, Flask, REST APIs, JWT Authentication

Databases: PostgreSQL, MongoDB, MySQL, MS SQL Server, H2

AI and Data: Pandas, NumPy, Scikit-learn, Data Preprocessing, Feature Engineering, Data Visualization

Tools and Platforms: Git, GitHub, SmartTomcat, Mongoose, VS Code, Postman

Concepts: Object-Oriented Programming, RESTful Architecture, Agile Methodology, Database Design, Authentication & Authorization

PROJECTS

TravelGenie - Full-Stack Mobile Travel Planning Application

April 2026 - May 2026

Technologies: React Native, Expo, Node.js, Express.js, MongoDB, Mongoose, JWT

- Built a cross-platform mobile travel application enabling users to plan trips, explore destinations, manage hotel bookings, track expenses, and view transport schedules across Sri Lanka.
- Designed and integrated a secure REST API with JWT-based authentication supporting three access levels: guest, user, and admin moderation.
- Implemented trip planning, budget tracking, expense management, hotel selection, user reviews, push notifications, and admin moderation workflows.
- Modeled 9+ MongoDB collections using Mongoose for users, districts, places, hotels, trips, expenses, reviews, transport schedules, and notifications.

TravelGenie - AI-Powered Travel Planning Web Application

January 2026 - May 2026

Technologies: React, Vite, Node.js, Express.js, PostgreSQL, Flask, JWT, REST APIs

- Developed a full-stack AI-assisted travel platform enabling multi-day trip planning with itinerary generation, hotel suggestions, and travel cost analysis for destinations across Sri Lanka.
- Integrated a React frontend with an Express.js backend, PostgreSQL database, and a Flask-based AI microservice for intelligent destination recommendations.
- Built expense management features including budget vs. actual spending comparison, visual tracking dashboards, price history charts, and automated price-change alerts.
- Secured all endpoints with JWT authentication and implemented role-based access control across guest, user, and admin roles.

DengueRisk - AI-Based Dengue Risk Prediction System

August 2025 - October 2025

Technologies: Python, Pandas, NumPy, Scikit-learn, Matplotlib, Data Visualization

- Trained a Scikit-learn classification model to predict dengue risk levels across 25 Sri Lankan districts using weekly case counts and weather data.
- Performed data preprocessing, missing-value handling, and feature engineering on multi-source datasets to improve model accuracy.
- Created visualizations of dengue trends, seasonal patterns, and risk heatmaps to support early outbreak detection and public health analysis.

Secure Web-Based E-Voting System for Campus Awards

July 2025 - October 2025

Technologies: Java, React, Vite, H2 Database, MS SQL Server

- Built a secure web-based e-voting platform enforcing one-vote-per-user-per-category for campus award nominations, with full input validation and session management.
- Developed admin-controlled event management and nomination management features with real-time result dashboards.
- Created transparent result-viewing interfaces enabling administrators and voters to track outcomes during and after voting periods.

Home Tutor Management System

March 2025 - May 2025

Technologies: Java, JavaScript, CSS, SmartTomcat

- Created a web-based platform connecting students with home tutors, featuring tutor registration, subject-based matching, and automated session scheduling.
- Built frontend interfaces and backend services to manage tutor-student connections, profiles, and session history.

EDUCATION

BSc (Hons) Information Technology - Specializing in Artificial Intelligence

2024 - Present

Sri Lanka Institute of Information Technology (SLIIT), Sri Lanka

Relevant Coursework: Object-Oriented Programming, Data Structures and Algorithms, Database Management Systems, Web Development, Software Engineering, Artificial Intelligence, Machine Learning Fundamentals

G.C.E. Advanced Level - Physical Science Stream

2021 - 2023

St. Mary's National College, Veyangoda

G.C.E. Ordinary Level - 2020

ADDITIONAL INFORMATION

Languages: English (Professional), Sinhala (Native)

Activities: Student Member, Institute of Electrical and Electronics Engineers (IEEE)
